

LOCAL STAFF,

LOCAL CUSTOMER SERVICE!

SERVICE

Simple. Easy. Fast. We are your local fiber internet providers. You won't reach an international call center when you call us. We have 24/7 support for troubleshooting any issues. Our local call center and local technicians are here to support you!

SPEED

No matter how many devices your family has, no matter how busy your family is, our residential shared internet is fast enough to keep up. How fast is fast? It's internet that moves at speeds up to 1 Gigabit per second (Gbps). That's up to 100 times faster than your standard internet connection. No more worrying over buffering or progress bars. Our internet can move as fast as you and your family can.

RELIABILITY

Rest assured, network reliability is a top priority for us. Why is this important? You and your family are using multiple devices at the same time. So, that means data needs within your household are exploding. From uploading and downloading assignments, to emailing from your phones, playing games on your tablet, streaming movie and videos, to your home office, you need Internet that can handle the demand. At Ocala Fiber Network, we provide the reliability and consistency of a symmetric fiber-based network with up to 1 Gig speed.

SYMMETRICAL BANDWIDTH

Our fiber internet service provides symmetrical bandwidth speeds up to 1 Gigabit with flexible bursting. What does that mean for you? It means the maximum rate of transfer is the same for both up-and downloading. Equal speeds means that you can do the two simultaneously, equally fast. It's not just fast, it's Ocala Fiber Network fast!
